

Samsung Galaxy Camera 2 Battery Replacement

This is a guide on locating, removing and replacing the camera's battery.

Written By: Timothy Proto

INTRODUCTION

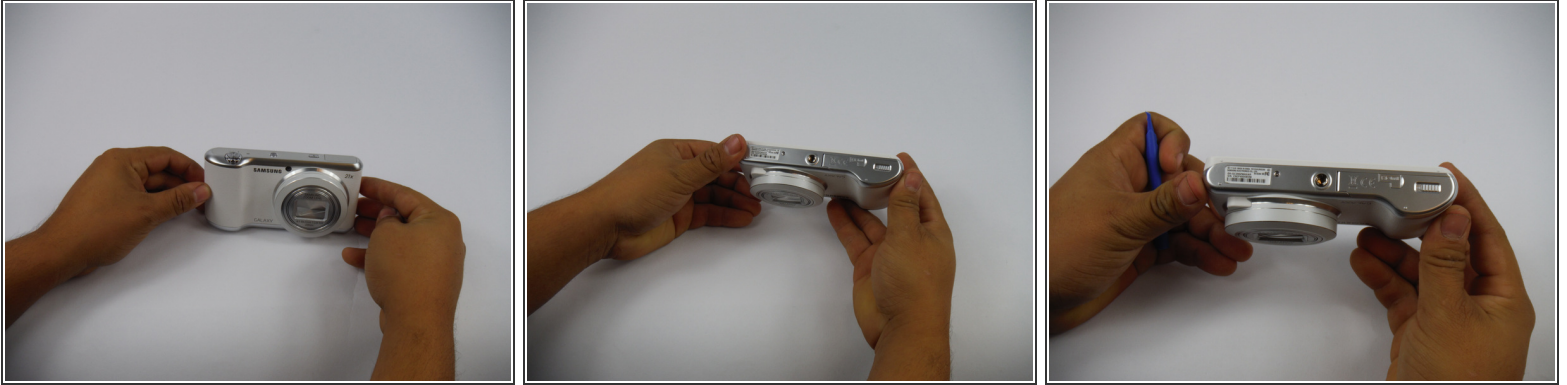

In this guide, you will learn how to replace the battery in your Samsung Galaxy Camera 2. Replacing the battery can fix a number of problems you were having with your camera; the camera won't stay charged like it used to, the camera doesn't charge at all, or the camera won't start. Also, removing the battery is an essential part of taking apart the rest of the camera to change any other part. You wouldn't want to risk getting shocked!

TOOLS:

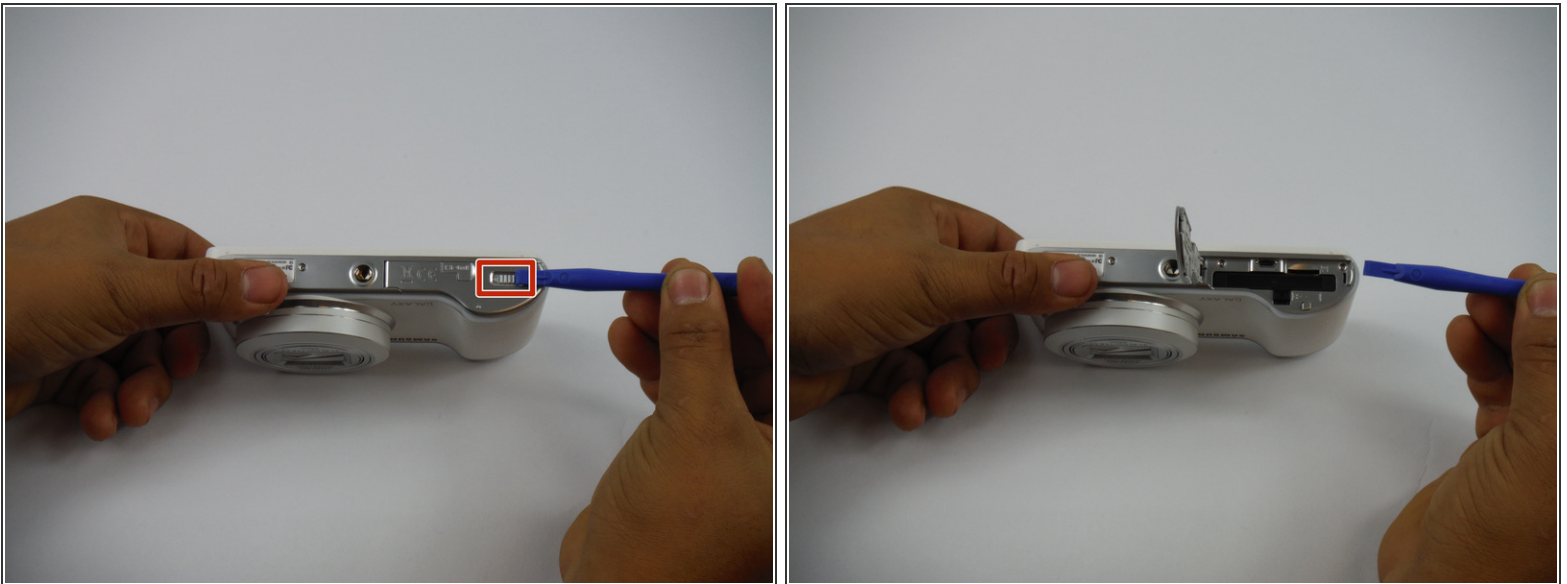

- [iFixit Opening Tools](#) (1)
-

Step 1 — Battery

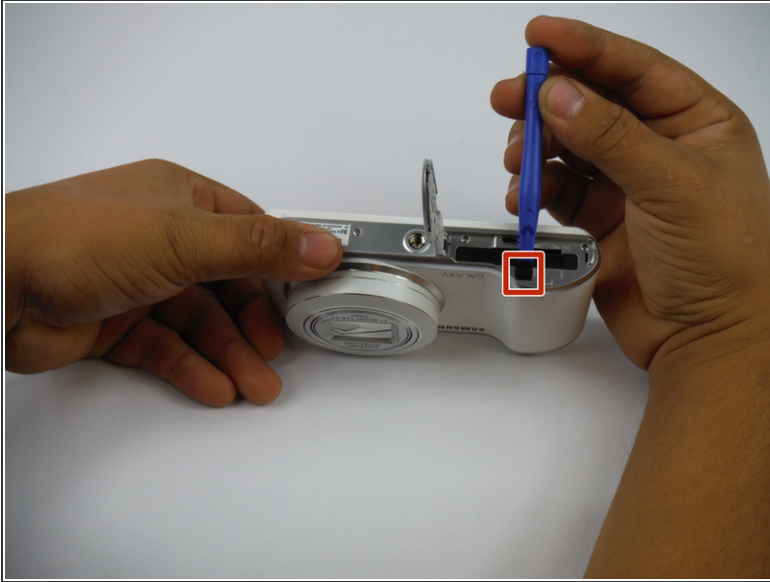

- Face the camera towards you. Then turn it to where the battery door is facing up and on the right side.

Step 2

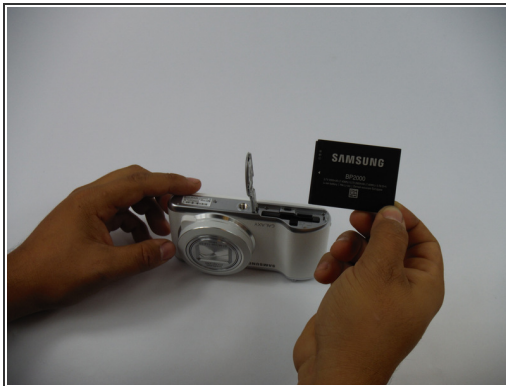

- Locate the small latch on the right side of the camera.
- Slide the latch to the left to open the battery door.

Step 3

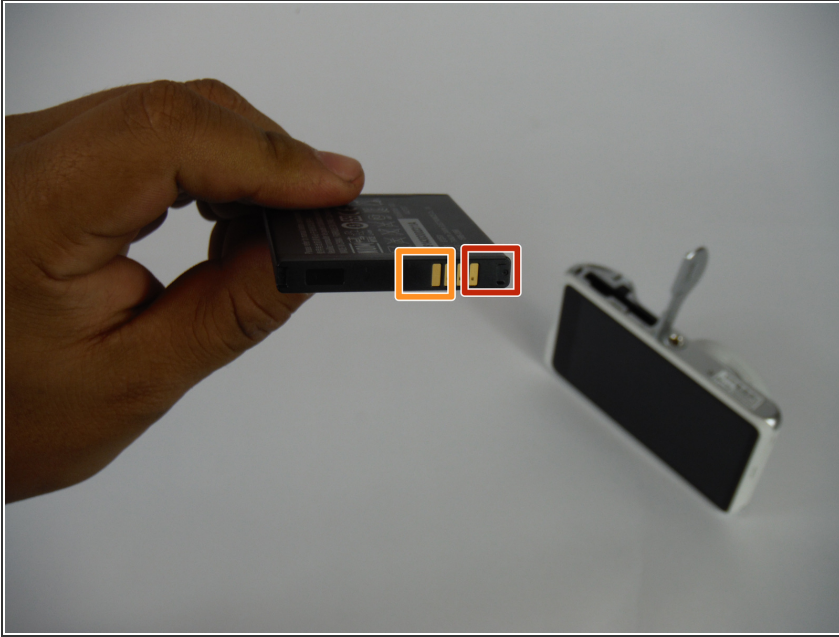

- Locate the battery, a black cell held in by a small clip (indicated by an outfacing arrow).
- Pull the clip toward you to release the battery.

Step 4

- Take the old battery out and discard accordingly.

Step 5

- To replace the battery, first locate the positive (red) and negative (orange) terminals displayed on the battery.
- Insert the battery by matching the terminals with the battery compartment in the camera using the small icon to indicate the correct orientation.

Step 6

- After the battery is inserted, close the outer door and slide the latch towards to the right to close the door.
